

Looking for a better solution to process your CNP - Card Not Present transactions?

Look no further. The Trident Virtual Terminal provides simple credit card authorization and settlement through a secure web-interface - right from your desktop computer.

The Virtual Terminal replaces standard authorization terminals and provides a tailored solution for merchants who manually enter credit card payments for mail/phone or internet sales. And, it's 100% PCI Data Compliant.

Access the Virtual Terminal with any standard web browser and your secure user ID and password, and start taking advantage of a complete suite of features including:

- Authorization and settlement for all major credit cards
- Real time authorization and batch processing support
- Intelligent commercial, business, purchasing and GSA card level II support
- Unlimited users - No additional licensing
- Integrated user security and customer fraud screening tools
- Support for installment and recurring payment transactions
- At-a-glance activity, custom reports, transaction search features
- Required fields data ensures compliance with MasterCard[®] and Visa[®] rules
- Import/Export transaction and customer records

key benefits

MasterCard/Visa data and rate compliance

Missing required data affects the rate you are billed for Visa and MasterCard CNP-Card Not Present transactions.

The Virtual Terminal's integrated required fields ensures that you are prompted for rate-sensitive data prior to authorization and settlement of your transactions.

Save data entry time with Re-Bill

Like many businesses, you have repeat customers. Many of your customers use the same credit card each time.

With Re-Bill, it's easy to store and recall customer records with the click of a mouse, eliminating the need to enter billing and payment card information for each new transaction.

New purchase amount? No problem. You have the option to change the payment amount for each new purchase.

Secure user access & cardholder data storage

- Each user account is governed by location access, transaction processing, and reporting permissions
- Password rules and requirements are enforced to meet card association PCI Compliance mandates
- Sensitive cardholder information is stored securely in the Virtual Terminal built-in database

Integrated fraud screening technology Address Verification and Card Verification Value filtering

Utilize the security features of the Virtual Terminal to screen and automatically place transactions on hold when the address, zip code, and/or CVV value do not match the cardholders information on file with their bank.

See what our customers are saying about the Trident Virtual Terminal . . .

"As a web based payment program, the Trident Virtual Terminal is much better than using a program that resides on our PC's or servers . . .

Virtual Terminal is easier to activate and use and there's no periodic updates to install. It also supports our cardholder security compliance."

Alan Bach
Vantage Controls, Inc.

ROSEMOUNT OFFICE SYSTEMS

"Trident Virtual Terminal is so user friendly, it is almost as simple as swiping a card."

Lindsay Larson
Rosemount Office Systems

"We use Trident Virtual Terminal for all our customer cardholder initiated website sales and corporate office credit card sales and refunds - it's so easy to access and use."

Karen Hamers
Merit Apparel

"Because our credit card sales are non-swiped transactions, Trident Virtual Terminal is much more convenient and efficient for payment processing than a physical credit card terminal."

Erin Oliver
Cirris Systems

CORPORATE SUITES PLUS, INC.

"We are a smaller corporation, and the convenience that Trident Virtual Terminal offers has made this aspect of our business more dependable and more accessible."

Lisa Butus
Corporate Suites Plus, Inc.

"Trident Virtual Terminal is the ideal solution for a bankcard acceptor like us, with regional offices, because of the multi-user capabilities, security features, and reporting."
